Pyramid Of Cans-Mel Tillis

```
G                                    G7         C
I drink from cans and stack 'em in a pyramid so high
                        G                    D7
As a monument to how I feel then she told me goodbye
G                               G7            C
I like my friends around me but they all understand
                      G                   D7         G
Why I keep her memory buried beneath the pyramid of cans

    C                                  G
The power of the pyramid I don't understand
      C                             A7              D7
It's a mystery that gets bigger  with every empty can
G                                                 G7            C
I stack them high and watch them fall like a castle in the sand
                           G              D7          G
Then I drink one more and start another pyramid of cans

                                     G7                   C
We used to come here often and the band would play our song
                      G                    D7
Now I wonder if they wonder why I come in alone
G                                          G7                        C
Cause lately I come in here nightly they think I'm their biggest fan
                      G                  D7          G
But the power pulling me in here is the pyramid of cans

Repeat #2

C                          G              D7          G
Then I drink one more and start another pyramid of cans
```
